

Serving Humanity : Free Medical Help

Introduction

The overall Aim of this paper is to Highlight that in this ever more prosperous world, there are Billions of people who either have no access to even a modicum of Primary Medical Aid, or can not afford a doctor and/ or can not afford costly Prescription Drugs. The crux Aim of the paper is that Internet and IT, with the help of

e-Medicine have the Infrastructure, the Tech Tools, and Medical configuration to start filling this crying need of the sick world over. Government every where have no inclination to do it except election time never to be kept promises. IN this Knowledge Age isn't it a shame that TB (Tuberculosis) is still the biggest killer.

I propose to present here :

1. Can Health Portals do this job.
2. How to reach the Free Health Portals service to those who need it the most.
3. How the needy can be sure that such Portals are not Cyber Scam.
4. This essentially has to be private/ Individual Initiative. The constraints which block the

genuine such Portals providing the service

they are designed to provide. They can not meet

the perhaps unmeetable Hons Code requirements, as mostly they lack that kind of

funds.

5. How then this can be made possible.

Health Portals.

The adage that there are no free lunches equally applies to the major Health Portal. If my and some others who have shared their experiences with me, is any guide, they provide no meaningful real medical Help. Like all promise of free everything one is told on the internet, nothing is free (This merely meets a Legal binding of US Law). They to my best understanding are neither non-profit, nor charity missions. There is one Christian Portal in the US, which first binds to give fixed donation before you can get any help.

On this account my personal belief that atleast Primary Physician help can be advised by the Health Portals. Through our portal :

www.dochelpline.com

We have been able to provide Physician Advice to many needy sick world over. And it has helped resolve primary sickness and as well some extent of

Specialist care. To some we have also helped to get costly prescription Drugs from India, where they are cheap to US. Those who have trusted us have not lost their money.

Answer, therefore, is that Honest Free Health Portals can be useful in this kind of help to needy sick.

How to take such Portals to the Needy.

Short answer is most search Engines should after proper verifications, if they so choose, put non-profit Free Health Portals in their data bases free. Similarly the net media and other advertising nets as well as print media advertise free.

Is this possible. Very strict yard sticks can be put in place to qualify for this. But all concerned may do as much as possibly they can for this humanitarian service.

Is it seeking the Utopia. Perhaps. However societal will and determination can make it possible. A system can be devised to punish those who misuse it.

Testing the credibility of Health help Portals.

Some essentials.

1. Such portals should not have any funding. They must be Non-profit.
2. A monitoring organisation be set up. They should do sly monitoring. That is to put to rigorous test these portals.
3. A qualified Doctor must be with the portal.
4. Prescription drugs they reach to the needy sick be put through drug check to rule out spurious Drugs.

Since this comes under the mail order laws; After all the above monitoring has been done, a few who still employ cyber cheating be strictly dealt by the local laws of the country from where they operate.

It needs to be mentioned merely e-Medicine and Internet can by itself not serve the billions world over who desperately need medical help. Individuals, even if they make a small residual income from it will be doing yeomens' service if carefully crafted system is put in place to propel and push it. Almost whole continent is being wiped out by HIV. Such portals can be very useful to provide cheap Drugs to the needy. They in the process will very actively be able to deseminate HIV awareness, where it is needed the most.
